JNST OOOO
Disease, Culture, Politics, HIV
MW 2:30-3:50pm
Prof. Tim Seiber

Diseases play an important role in shaping human culture, politics, and art. In this seminar, we'll study the dynamic roles diseases play. We will pay special attention to the case of HIV/AIDS, which since the early 1980s has structured much biomedical research, public debate, international treaties, activism, and culture.
